DETAILED ACTION

Drawings

1. Figures 1-5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 1, 6, 7 are objected to because of the following informalities: Appropriate correction is required.

Regarding claim 1, line 11, the word "said" (second occurrence) should be deleted.

Regarding claim 6, line 2, insert --a--before the word "register".

Regarding claim 7, line 8, the word "said" (second occurrence) should be deleted.

Claim Rejections - 35 USC § 112

3. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, line 11, the term "the phases" lacks antecedent basis; line 13, the term "its" is not clear to what it refers.

Regarding claim 7, line 8, the term "the phases" lacks antecedent basis; line 9, the term "those" is not clear to what it refers.

Claims 2-6 and 8-9 are rejected by virtue of their dependency.

Allowable Subject Matter

4. The following is a statement of reasons for the indication of allowable subject matter: none of the prior art discloses a circuit and method for receiving a plurality of serial data signals having the same bit rate comprising a common word clock generating means for providing a common word clock in response to phases of the bit clock signals, and each of the plurality of word forming means is so response to the common word clock signal to provide its word aligned to the common word clock as recited in claims 1 and 7.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ishida (U.S. Pat. 5,506,796) discloses a digital signal processing circuit selectively operable in either a normal or a pseudorandom noise generative mode.
